GEOCON Professional Services, LLC (GEOCON) was retained by The Pickus Companies to conduct a geotechnical evaluation for a proposed apartment building located in Champaign, Illinois.

GEOCON coordinated and performed the geotechnical field exploration and prepared a geotechnical engineering report for a 19-story apartment building with a below-grade parking garage, stand alone grocery store and associated parking/drive areas, which occupied an entire city block. Investigation included pressuremeter testing in numerous boreholes, ranging from 25 to 75 feet in depth, and analysis of the data for shallow and deep foundation design including belled, drilled shaft foundations.
