Village of Sauk Village

GEOCON Professional Services, LLC (GEOCON) was retained by Robinson Engineering, Ltd. (REL) to provide confined space entry services in support of their design and construction of improvements to the water treatment plant in Sauk Village, Cook County, Illinois. GEOCON provided appropriately trained personnel and necessary equipment to enter the pump station sewer in order to obtain measurements and photographic documentation of the existing water backwash structures. This information was subsequently utilized by REL to prepare drawings and design specifications for necessary improvements to the water treatment plant.

GEOCON personnel receive classroom and hands-on training for safe entry into permit-required confined spaces as implemented in accordance with the requirements of Occupational Health and Safety Administration (OSHA), Title 29 of the Code of Federal Regulations (CFR) Part 1910.146.
