GEOCON was contracted to perform subcontract drilling operations on several proposed wind farm sites in Illinois, Indiana, Michigan, Minnesota and Ohio. Projects typically consist of 4 to 30 soil borings ranging from 15 to 70 feet in depth with occasional rock coring, thin walled tube sampling, standpipe piezometer installation and various laboratory soil testing including grainsize analysis, Atterberg Limits, proctors, unit weight, moisture content and unconfined compressive strengths.
